Projects

LostTracker Missing Persons App

- LostTracker is a Missing Persons application built using Vite, React, and TypeScript with Appwrite serving as the backend and database.
- Objective is to help users search for and view profiles of missing persons with infinite scrolling and location-based features using Leaflet. Users can also bookmark profiles and post new missing person profiles.

Issue Tracker

- Developed a modern, production-grade, full-stack NextJS application with Typescript that allows users to manage, maintain and update issues during a project development to streamline the process of issue tracking.
- Implemented NextAuth user authentication, built RESTful API with MySQL and Prisma adapter.
